WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

- Tine bar 400 x 50 x 12 with a 16 hole in the middle
- Nine 12 mm tines 250 long at 45 pitch, welded into 12.5 holes through the bar (plug weld both sides)
- Ballast bar 380 x 40 x 40 welded on top of the tine bar
- Two bails 40 x 8 from the ballast ends up to a 90 x 40 x 12 top plate that carries the standard tab
- Drag eye 40 x 40 x 12, 16 hole, on the front face
- Use: lower on the rope, pull the working line on the drag eye to draw the tines through scum, lift, repeat
