Scale 1:10; looking at the right side (along -X)

WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Top disc 300 x 6 with a 100 hole and the standard tab
Funnel rolled from 2.5 sheet: 300 at the top to 120 at the throat, 250 deep; seam welded; welded to the disc
Pole socket 33.7 x 3.2 tube 150 long at the rim, gusseted
Steel sling 300 long from the disc to an EN 362 auto-locking connector hanging below the throat
Use: steer with the 2 m pole so the connector clips the ring of a line already on the casualty's harness
The haul is made with certified rescue equipment only
